

HEPLAST-PIPE d.o.o. is the manufacturing company established in 1994. Today Heplast-pipe stands for the leading Croatian producer of plastic pipe systems. The main activity of the company is the manufacture and sales of plastic pipes and fittings, technical testing and analysis. HEPLAST products are applied in utility, civil engineering and building industry. Polyethylene and polypropylene pipes are produced for pressure and non-pressure pipe applications. Products field of use cover PE pipes for water supply systems, gas pipelines, pressure and non-pressure sewerage, cable protection and different industrial applications, PP/PE corrugated pipes for underground drainage and sewerage and PE/PP manholes, inspection chambers, gutters and fittings for sewage systems.

Heplast-pipe pursues a policy of continuous development. Our manufacturing and testing equipment are almost certainly most modern and technologically advanced in Europe. Every year we invest significant assets into increase of capacities, development of product assortment, emphasizing in particular the investment in quality of services, education and employees training, as also environmental protection.

All HEPLAST products are manufactured and tested under a Quality Management System that is confirmed by conformity with the leading world standards **ISO 9001 Quality Management System**, **ISO 14001 Environmental Management System** and **OHSAS 18001**. Over the years we invested significant assets into quality approvals so all our products are approved to relevant international, European and national technical specifications including DVGW, ÖNORM EN, BDS EN, HRN EN etc.

Heplast-pipe Testing Laboratory is recognized in competency for selected testing of mechanical characteristics of thermoplastics pipes and plastics according to EN ISO/IEC 17025 standard.

Manufacturer controls cover all stages of production from raw material conveying through extrusion to finished product handling, storage and dispatch. We use raw materials from first-class European manufacturers which guarantee high quality of our products.

Our production plants are located at the NW Croatia, near Hungarian and Slovenian border. The company disposes of 35 000 sq. meters production and warehouse base. Up-to-date production and testing equipment guarantee the best performance in product application. We started as a PE pipe producer back in 1994 and now we are producing PE pipes for water, gas, sewage, cable protection and other applications both pressure and non-pressure. We also produce corrugated PP/PE pipes up to ID 1000 mm for sewage systems and complete range of elements for sewerage including manholes and fittings from PP and PE.

Our main goal has always been to provide products which will fully meet, even exceed customer requirements. Each product must satisfy the requirements of all legal and technical regulations, especially for we produce products of high risk (distribution of natural gas, drinking water and sewage disposal).

Municipal service, public utility companies and installation companies taking part in construction of infrastructure networks dominate among buyers. Our products have been installed throughout the regional and EU markets. We also work closely with several other leading European producers and dealers enabling us to offer the complete range of products for construction, civil engineering and building industry in the field of water industry, wastewater and gas market.
